

Year 5 Science Projects:

Investigating the life cycles of plants in different environments:

Can you find out about plants and trees which grow in different environments?

Can you find out about their life cycles and the different parts of plants in other environments? Are they the same or different to plants which grow near us? In what ways have they adapted to their specific environment.

You could choose from any of the following environments to investigate: - Seas/oceans - Deserts - Rainforests - Prehistoric plants and trees.

*We would like you to present what you have found out in an information booklet including:
Front page Contents Page Glossary Index.*

You will be able to find information about these topics by reading books from home, research on the internet or in magazines, or by asking adults at home what they know about this topic.

Remember this should be your own work and not just pages printed straight off the internet!
