Calculation Policy Introduction

Introduction to the policy

This policy outlines how we teach maths at Roe Green Junior School. At the centre of our maths teaching is the belief that all children have the potential to understand mathematical concepts and succeed. Our aim is to give all children a strong foundation of maths skills, upon which they can build through secondary school and beyond. This is achieved through clear understanding of concepts and a determination to excel.

They should have access to the same curriculum and deepen their conceptual understanding by tackling challenging and varied problems. With calculation strategies children must be able to demonstrate their understanding of these procedures through the use of concrete materials and pictorial representations. This policy outlines the calculation strategies that should be taught and used across the school, in line with the requirements of the 2014 Primary National Curriculum.

Mathematical Language

The 2014 National Curriculum is explicit in the need for children to use the correct mathematical language as a central part of their learning. The non-statutory guidance highlights the requirement for children to extend their language around certain concepts. It is therefore essential that teaching using the strategies outlined in this policy is accompanied by the use of appropriate and precise mathematical vocabulary. High expectations of mathematical vocabulary is essential.

Concrete – Pictorial – Abstract

This policy has been designed to teach children through the use of concrete, pictorial and abstract methods. This calculation policy should be used to support children to develop a deep understanding of number and calculation.

Children develop an understanding of a mathematical concept through the three steps of: concrete, pictorial and abstract approach. Reinforcement is achieved by going back and forth between these representations.

Concrete Representation

This is the first step in a child's learning. The child is introduced to an idea or skill by acting it out with real objects. This is a "hands on" component using real objects and it is the foundation for conceptual understanding.

Pictorial Representation

Once the child has sufficiently understood that "hands on" experience, they can progress to relating them to pictorial representations, such as diagrams or pictures of a problem.

Abstract Representation

This is the third step in a child's learning. The child should now be capable of representing problems by using mathematical notation, for example: $12 \div 2 = 6$.

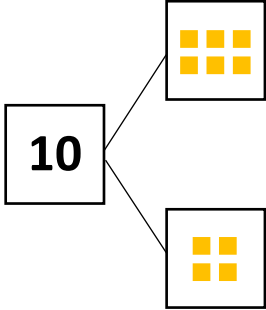

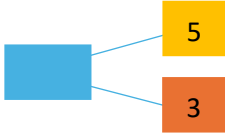

The importance of understanding place value

All children across the school will constantly refer to their understanding of place value. This includes the value of digits and the movement of digits when multiplying and dividing by multiples of 10.

10 TH	TH	H	T	O	$\frac{1}{10}$	$\frac{1}{100}$	$\frac{1}{1000}$

These grids will be used in maths lessons and must be displayed on maths walls. Children will be taught to first understand digit values and move on to sketch these charts whenever needed in their work

YEAR 1 - ADDITION

Objective/Strategy	Concrete	Pictorial	Abstract
<p>Combining two parts to make a whole: part-whole model</p>	<p>Use part, part whole model.</p>  <p>Use cubes to add two numbers together as a group or in a bar.</p>  	<p>Use pictures to add two numbers together as a group or in a bar.</p>    	<p>$8 = 5 + 3$</p> <p>$5 + 3 = 8$</p>  <p>Use the part part whole diagram as shown above to move into the abstract.</p> <p>Include missing number questions to support varied fluency:</p> <p>$8 = ? + 3$</p> <p>$5 + ? = 8$</p>
<p>Starting as the bigger number and counting on</p>	 <p>Start with the larger number on the bead string and then count on to the smaller number 1 by 1 to find the answer.</p>	 <p>$12 + 5 = 17$</p> <p>Start at the larger number on the number line and count on in ones or in one jump to find the answer.</p>	<p>$5 + 12 = 17$</p> <p>Place the larger number in your head and count on the smaller number to find your answer.</p>

Regrouping to make 10.

This is an essential skill for column and addition later.

$$10 + 2 = 12$$

Start with the bigger number and use the smaller number to make 10. Use ten frames.

$$3 + 9 =$$

Use pictures or a number line. Regroup or partition the smaller number using the part, part whole model to make 10.

$$9 + 5 = 14$$

$$7 + 4 = 11$$

If I am at seven, how many more do I need to make 11? How many more do I add on now?

Represent & use number bonds and related subtraction facts within 20.

2 more than 5

	Draw 2 more Balls
$5 + 2 =$	

Include missing number questions:

$$8 = ? + 3$$

$$5 + ? = 8$$

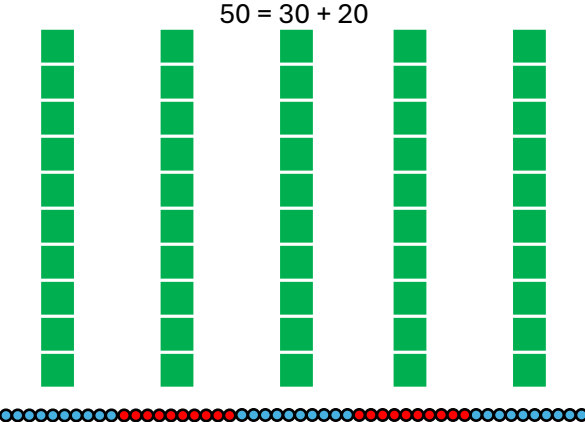

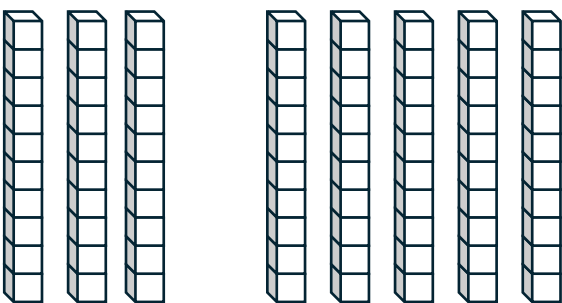

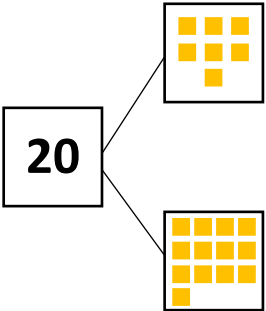

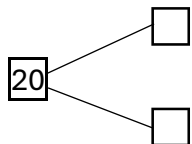

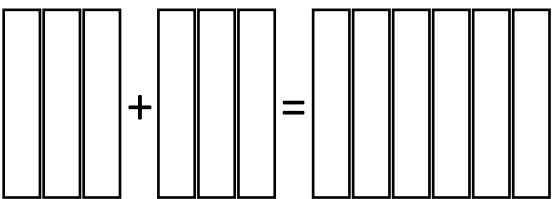

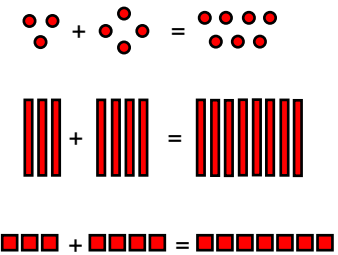

Emphasis should be on the language

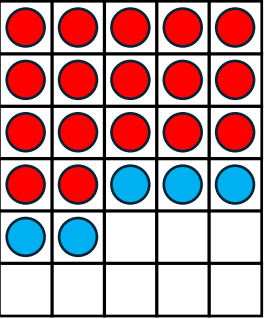

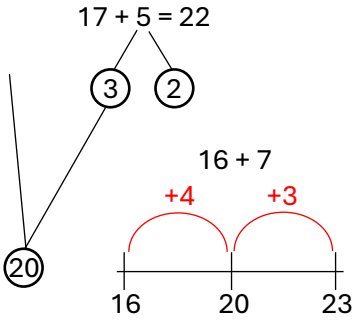

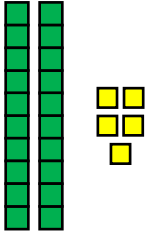

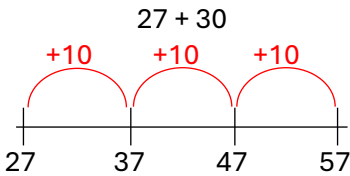

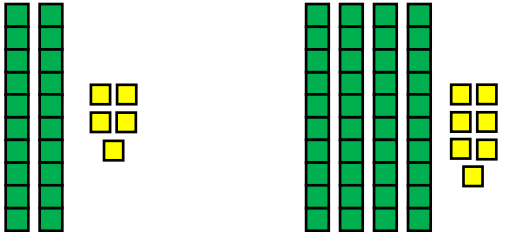

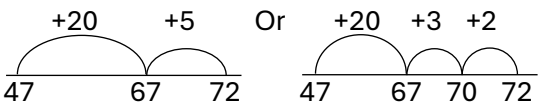

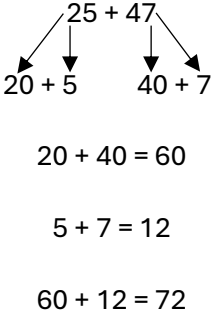

'1 more than 5 is equal to 6.'

'2 more than 5 is 7.'

'8 is 3 more than 5.'

YEAR 2 - ADDITION

Objective/Strategy	Concrete	Pictorial	Abstract
Adding Multiples of ten	<p style="text-align: center;">$50 = 30 + 20$</p>  <p style="text-align: center;">Model using dienes and bead strings</p>	<p style="text-align: center;">Pictorial</p>  <p style="text-align: center;"> $3 \text{ tens} + 5 \text{ tens} = \underline{\hspace{2cm}} \text{ tens}$ $30 + 50 = \underline{\hspace{2cm}}$ </p> <p style="text-align: center;">Use representations for base ten.</p>	<p>$20 + 30 = 50$</p> <p>$70 = 50 + 20$</p> <p>$40 + \square = 60$</p>
Use known number facts Part, part whole	 <p style="text-align: center;">Children explore ways of making numbers within 20</p>	 <p style="text-align: center;"> $\square + \square = 20$ $20 - \square = \square$ $\square + \square = 20$ $20 - \square = \square$ </p>	<p>Explore commutativity of addition by swapping the addends to build a fact family. Explore the concept of the inverse relationships of addition and subtractions and use this to check calculations.</p> <p style="text-align: center;"> $\square + 1 = 16$ $16 - 1 = \square$ $1 + \square = 16$ $16 - \square = 1$ </p>
Using known facts	<p style="text-align: center;"> $\square \square + \square \square = \square \square \square \square \square \square$ $\square \quad \square$ </p> 	 <p style="text-align: center;">Children draw representations of H,T and O</p>	<p style="text-align: center;">$3 + 4 = 7$</p> <p style="text-align: center;"><i>leads to</i></p> <p style="text-align: center;">$30 + 40 = 70$</p> <p style="text-align: center;"><i>leads to</i></p> <p style="text-align: center;">$300 + 400 = 700$</p>

<p>Bar model</p>	 <p>$3 + 4 = 7$</p>	 <p>$7 + 3 = 10$</p>	<table border="1" data-bbox="1659 102 2040 172"> <tr> <td>23</td> <td>25</td> </tr> <tr> <td colspan="2">?</td> </tr> </table> <p>$23 + 25 = 48$</p>	23	25	?	
23	25						
?							
<p>Add two digit numbers and ones</p>	 <p>$17 + 5 = 22$ Use ten frame to make 'magic ten'</p> <p>Children explore the pattern. $17 + 5 = 22$ $27 + 5 = 32$</p>	<p>Use part part whole and number line to model.</p> 	<p>$17 + 5 = 22$</p> <p>Explore related facts</p> <p>$17 + 5 = 22$ $5 + 17 = 22$ $22 - 17 = 5$ $22 - 5 = 17$</p> <table border="1" data-bbox="1827 384 2007 488"> <tr> <td colspan="2">22</td> </tr> <tr> <td>17</td> <td>5</td> </tr> </table> <p>Lead into recording in column format, to reinforce place value and prepare children for formal written methods with larger values.</p>	22		17	5
22							
17	5						
<p>Add a 2 digit number and tens</p>	 <p>$25 + 10 = 35$</p> <p>Explore that the ones digit does not change</p>		<p>$27 + 10 = 37$</p> <p>$27 + 20 = 47$</p> <p>$27 + \square = 57$</p>				
	 <p>Model using dienes, place value counters and numicon</p>	 <p>User number line and bridge ten using part whole if necessary.</p>	 <p>Lead into recording in column format to reinforce place value and prepare children for formal written methods with larger values</p>				

Add three 1-digit numbers

Combine to make 10 first if possible. Or bridge 10 then add third digit

Regroup and draw representation.

$$\textcircled{4} + 7 + \textcircled{6} = \boxed{10} + \boxed{7}$$

10

$$= \boxed{17}$$

Combine the two numbers that make/bridge ten then add on the third.

YEAR 3 - ADDITION

Objective/Strategy	Concrete	Pictorial	Abstract																																																										
<p>Column Addition – no regrouping (friendly numbers)</p> <p>Add two or three 2 or 3 digit numbers.</p>	<table style="width: 100%; border-collapse: collapse;"> <tr> <td style="text-align: center; border: 1px solid black; width: 50%;">T</td> <td style="text-align: center; border: 1px solid black; width: 50%;">O</td> <td rowspan="2" style="padding-left: 10px; vertical-align: middle;">Dienes or numicon</td> </tr> <tr> <td style="border: 1px solid black;">  </td> <td style="border: 1px solid black;">  </td> </tr> </table> <p style="text-align: center; margin-top: 10px;">Add together the ones first, then the tens.</p> <table style="width: 100%; border-collapse: collapse; margin-top: 10px;"> <tr style="background-color: #f4a460;"> <th style="width: 15%;"></th> <th style="width: 35%; text-align: center;">Tens</th> <th style="width: 30%; text-align: center;">Units</th> </tr> <tr> <td style="text-align: center; border: 1px solid black;">45</td> <td style="border: 1px solid black;">  </td> <td style="border: 1px solid black;">  </td> </tr> <tr> <td style="text-align: center; border: 1px solid black;">34</td> <td style="border: 1px solid black;">  </td> <td style="border: 1px solid black;">  </td> </tr> <tr style="background-color: #f4a460;"> <td></td> <td style="text-align: center;">7</td> <td style="text-align: center;">9</td> </tr> </table>	T	O	Dienes or numicon				Tens	Units	45			34				7	9	<p>Children move to drawing the counters using a tens and one frame.</p> <table style="width: 100%; border-collapse: collapse; margin-top: 10px;"> <tr> <td style="text-align: center; border-right: 1px solid black; width: 50%;">Tens</td> <td style="text-align: center; width: 50%;">Ones</td> </tr> <tr> <td style="border-right: 1px solid black; text-align: center;">  </td> <td style="text-align: center;">  </td> </tr> </table>	Tens	Ones			<table style="margin: 0 auto;"> <tr> <td></td> <td>2</td> <td>2</td> <td>3</td> </tr> <tr> <td>+</td> <td>1</td> <td>1</td> <td>4</td> </tr> <tr style="border-top: 1px solid black;"> <td></td> <td>3</td> <td>3</td> <td>7</td> </tr> </table> <p style="margin-top: 20px;">Add the ones first, then the tens, then the hundreds. 		9	3	.	5	1	1

YEAR 1 - SUBTRACTION

Objective/Strategy	Concrete	Pictorial	Abstract
Taking away ones	Use physical objects, counters, cubes etc to show how objects can be taken away. $4 - 2 = 2$  $4 - 2 = 2$ 	Cross out drawn objects to show what has been taken away.  $15 - 3 = 12$	$7 - 4 = 3$ $16 - 9 = 7$
Counting back	 Move objects away from the group, counting backwards.  Move the beads along the bead string as you count backwards		Put 13 in your head, count back 4. What number are you at?
Find the difference	Finding the difference (using cubes, Numicon or Cuisenaire rods, other objects can also be used). Calculate the difference between 8 and 5: 	Count on using a number line to find the difference. 	Hannah has 12 sweets and her sister has 5. How many more does Hannah have than her sister?

Children to draw the cubes/other concrete objects which they have used or use the bar model to illustrate what they need to calculate.

Find the difference between 8 and 5.

8 - 5, the difference is...

Children to explore why

9 - 6 = 8 - 5 = 7 - 4 have the same difference.

Represent and use number bonds and related subtraction facts within 20

(Part part whole model)

Link to addition – use the PPW model to model the inverse.

If 10 is the whole and 6 is one of the parts, what is the other part?

$10 - 6 = 4$

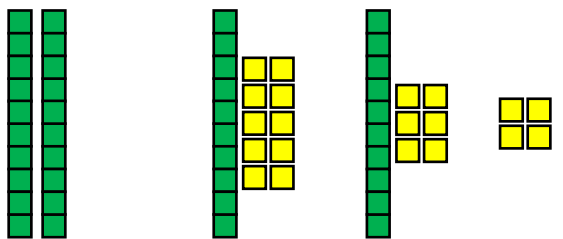

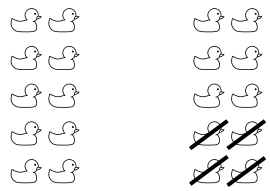

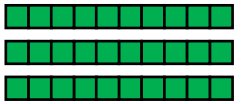

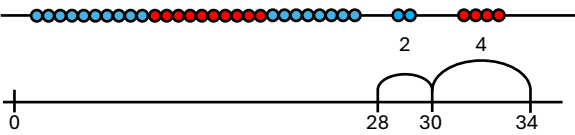

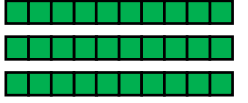

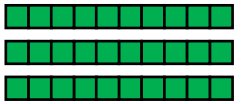

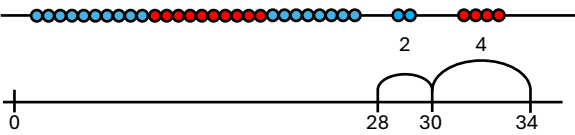

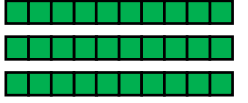

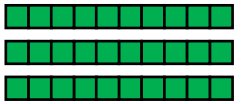

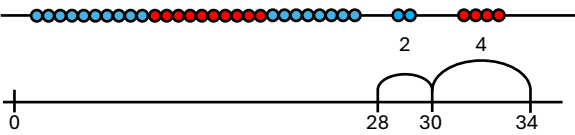

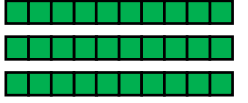

Use pictorial representations to the parts.

Move to using numbers within the part whole model.

YEAR 2 - SUBTRACTION

Objective/Strategy	Concrete	Pictorial	Abstract												
Regroup a ten into 10 ones	 <p style="text-align: center;">Use a PV chart to show how to change a ten into ten ones, use the term 'take and make'</p>	 <p style="text-align: center;">$20 - 4 =$</p>	$20 - 4 = 16$												
Partitioning to subtract without regrouping. <i>'Friendly numbers'</i>	$34 - 13 = 21$ <table border="1" style="margin: 10px auto; border-collapse: collapse;"> <tr style="background-color: #e8f5e9;"> <th style="width: 50%;">Tens</th> <th style="width: 50%;">Ones</th> </tr> <tr> <td style="text-align: center;"></td> <td style="text-align: center;"></td> </tr> <tr style="background-color: #e8f5e9;"> <th>Tens</th> <th>Ones</th> </tr> <tr> <td style="text-align: center;"></td> <td style="text-align: center;"></td> </tr> <tr style="background-color: #e8f5e9;"> <th>Tens</th> <th>Ones</th> </tr> <tr> <td style="text-align: center;"></td> <td style="text-align: center;"></td> </tr> </table> <p style="text-align: center;">Use Dienes to show how to partition the number when subtracting without regrouping.</p>	Tens	Ones			Tens	Ones			Tens	Ones			Children draw representations of Dienes and cross off.  <p style="text-align: center;">$43 - 21 = 22$</p>	$43 - 21 = 22$

Column multiplication

Children can continue to be supported by place value counters at this stage of multiplication. This is initially done where there is no regrouping.

Hundreds	Tens	Ones

It is important at this stage that they always multiply the ones first.

The corresponding long multiplication is modelled alongside.

X	3000	20	7
4	1200	80	28

This grid method may be used to show how this relates to a formal written method.

59	59	59	59	59	59	59	59
?							

8×59
 $8 \times 60 - 8$
 $8 \times 6 = 48$
 $8 \times 60 = 480$
 $480 - 8 = 472$

Bar modelling and number lines can support learners when solving problems with multiplication alongside the formal written methods.

This may lead to compact method - always carry at the top.

		1	2		
		3	2	7	
	X			4	
		1	3	0	8

Column Multiplication – Long multiplication.

Manipulatives may still be used with the corresponding long multiplication modelled alongside.

Progress to using the column method for long multiplication.

		1	2	3	4
		x		1	6
		7	4	0	4
+	1	2	3	4	0
	1	9	7	4	4

Multiplying
decimals up to 2
decimal places by
a single digit.

Always carry at the top.

YEAR 6 - DIVISION

Objective/Strategy

Long division with remainder.

Begin by modelling method with a 1-digit divisor.

Long Division	Divide:	<table border="1" style="display: inline-table; border-collapse: collapse;"> <tr><td style="width: 20px; height: 20px;"></td><td style="width: 20px; height: 20px; text-align: center;">2</td><td style="width: 20px; height: 20px;"></td></tr> <tr><td style="border-right: 1px solid black; border-bottom: 1px solid black; text-align: center;">3</td><td style="border-bottom: 1px solid black; text-align: center;">7</td><td style="border-bottom: 1px solid black; text-align: center;">4</td></tr> </table> <div style="display: flex; align-items: center;"> <div style="margin-right: 10px;">→</div> <div>Dividing 7 tens by 3, we get 2 tens, and some extra</div> </div>		2		3	7	4											
		2																	
	3	7	4																
	Multiply:	<table border="1" style="display: inline-table; border-collapse: collapse;"> <tr><td style="width: 20px; height: 20px;"></td><td style="width: 20px; height: 20px; text-align: center;">2</td><td style="width: 20px; height: 20px;"></td></tr> <tr><td style="border-right: 1px solid black; border-bottom: 1px solid black; text-align: center;">3</td><td style="border-bottom: 1px solid black; text-align: center;">7</td><td style="border-bottom: 1px solid black; text-align: center;">4</td></tr> <tr><td style="border-right: 1px solid black; text-align: center;"></td><td style="text-align: center;">6</td><td style="text-align: center;"></td></tr> </table> <div style="display: flex; align-items: center;"> <div style="margin-right: 10px;">→</div> <div>$3 \times 2 \text{ tens} = 6 \text{ tens}$.</div> </div>		2		3	7	4		6									
		2																	
	3	7	4																
	6																		
Subtract:	<table border="1" style="display: inline-table; border-collapse: collapse;"> <tr><td style="width: 20px; height: 20px;"></td><td style="width: 20px; height: 20px; text-align: center;">2</td><td style="width: 20px; height: 20px;"></td></tr> <tr><td style="border-right: 1px solid black; border-bottom: 1px solid black; text-align: center;">3</td><td style="border-bottom: 1px solid black; text-align: center;">7</td><td style="border-bottom: 1px solid black; text-align: center;">4</td></tr> <tr><td style="border-right: 1px solid black; text-align: center;">-</td><td style="text-align: center;">6</td><td style="text-align: center;"></td></tr> <tr><td style="border-right: 1px solid black; text-align: center;"></td><td style="text-align: center;">1</td><td style="text-align: center;"></td></tr> </table> <div style="display: flex; align-items: center;"> <div style="margin-right: 10px;">→</div> <div>Subtracting 6 tens from 7 tens.</div> </div>		2		3	7	4	-	6			1							
	2																		
3	7	4																	
-	6

	1	4																	
-	1	2																	
		2																	
Check:	<p>Check your answer: Dividend = Divisor x Quotient + Remainder</p>																		

Divide – the number inside the house with the number outside of the house. Put the answer on top.

Multiply – the number outside of the house by the number on top of the house. Put this answer below the number inside the house.

Subtract – the number inside the house from the number below the inside number.

Bring down – the next number in the dividend.

Repeat – all the steps repeated as many times as needed until you get down to 0.
 If there is a leftover this is your remainder.

When moving onto using long division with a 2-digit divisor, children can write out multiples first:

2	2	6	7	1	0

22, 44, 66, 88, 110 etc

Long division with decimal remainders

5	1	2	6	.0
-	1	0		
		2	6	
	-	2	5	
			1	0
		-	1	0
				0

When there is a remainder which you need to write as a decimal, bring down the 0 in the tenths column, and repeat the process as before.

How to Calculate Fractions

Begin with real life: The children themselves form the best introduction.

- One class is the whole.
- Number of children is the denominator.
- Group focused on is the numerator.

For example: Class of 28: One class = The Whole

28 children → 28 = Denominator

15 boys → 15 ← Subject

28 ← Total in group

Move on to dividing into groups using fraction vocab.

10 pieces in a satsuma – How many pieces in half the satsuma?

How many pieces is one fifth/quarter/third of the satsuma?

Give children pencils, cubes, fruit, sweets etc to create fractions.

Calculating Fraction Amounts

Children learn there are 2 steps:

- Step 1 – Divide the number by the denominator
- Step 2 – Multiply your answer by the numerator

For example: $\frac{3}{4}$ of 28

- $28 \div 4 = 7$ (number \div denominator)
- $7 \times 3 = 21$ (answer \times numerator)
- So $\frac{3}{4}$ of 28 = 21

Adding Fractions

$$\frac{1}{2} + \frac{2}{3} = \frac{3}{6} + \frac{4}{6} = \frac{7}{6} = 1\frac{1}{6}$$

L.C.D = 6

$$\longrightarrow 6 \div 2 = 3$$

$$\longrightarrow 3 \times 1 = 3$$

$$\longrightarrow 6 \div 3 = 2$$

$$\longrightarrow 2 \times 2 = 4$$

Subtracting Fractions

$$\frac{5}{7} - \frac{1}{3} = \frac{15}{21} - \frac{7}{21} = \frac{8}{21}$$

L.C.D = 21

$$\longrightarrow 21 \div 7 = 3$$

$$\longrightarrow 3 \times 5 = 15$$

$$\longrightarrow 21 \div 3 = 7$$

$$\longrightarrow 7 \times 1 = 7$$

Multiplying Fractions

Numerator x Numerator

Denominator x Denominator

$$\frac{1}{5} \times \frac{1}{4} = \frac{1 \times 1}{5 \times 4} = \frac{1}{20}$$

Dividing Fractions

Flip the second fraction and multiply

$$\frac{2}{5} \div \frac{1}{4}$$

$$\frac{2}{5} \times \frac{4}{1} = \frac{8}{5} = 1\frac{3}{5}$$

How to Calculate Percentages

This concept is introduced after fractions are secure so children can see the links and they can use specific skills where needed.

Begin by linking to fractions: the whole is 100%

So everything is part of 100.

Show lots of examples using money and shopping.

Make the connections between fractions, decimals and percentages.

Fraction	Percentage	Decimal
Half $\frac{1}{2}$	50%	0.5
Quarter $\frac{1}{4}$	25%	0.25
3 Quarters $\frac{3}{4}$	75%	0.75
Tenth $\frac{1}{10}$	10%	0.1
Hundredth $\frac{1}{100}$	1%	0.01

Key Percentages

To work out 10% we divide the number by 10 (refer to place value chart)

- Question – 10% of £1.50
- Calculation – $1.50 \div 10 = 0.15$
- So 10% of £1.50 = 15 pence

To work out 1%. We divide the number by 100 (refer to place value chart)

- 1% of 200
- $200 \div 100 = 2$

To work out 50%, 25% or 75% teach children to use their fractions knowledge.

To work out 15% of an amount – calculate 10% and halve it to make 5%. Add these together.

To work out a multiple of 10, for example 20%, 30% etc. Calculate 10% and multiply by the multiple.

For example:

- 30% of 500
- $500 \div 10 = 50$
- $50 \times 3 = 150$
- So 30% of 500 = 150
